Dreer's Autumn Gardening Guide

Order Early

The dates given below necessarily must be approximate as they depend upon climatic conditions. Where winter sets in early, plant as soon as possible.

Late August or September is the best time to start a new lawn or reseed the old one. See page 26.

September

Plant bulbs of Colchicum and Fall-Flowering Crocus just as soon as possible. The earlier they are planted now the better they will be. If you did not sow your new lawn or repair the old one during late August do so now or as soon as possible.

This is the most important month for planting bulbs in the garden to bloom next spring including Narcissus, Anemone, Brodiaea, Calochortus, Camassia, Spring Crocus, Chionodoxa, Eranthis, Erythronium, Fritillaria, Leucojum, Lilium candidum, Eremurus, Muscari, Ranunculus, Scilla, Snowdrops, Spring Starflower, (Triteleia), and Iris reticulata. Late in the month plant Dutch, English, and Spanish Iris. Start Lilies indoors, also Calla, Freesia, Ixia, Lachenalia, Leucocoryne, Ornithogalum, and Sparaxis.

Where winter sets in early sow the seed of hardy perennials marked in this catalog★. (See pages 18 and 19.) Where winter is a long way off other quick growing perennials can still be started from seed.

Enrich your soil where you grow annual flowers and annual vegetables with valuable humus at a trifling cost by sowing now a Green Manure Crop of Rye and Vetch. See page 25.

October

All the bulbs recommended for September planting can still be started this month as long as the ground is not frozen. But even in colder sections October planting is possible where the soil in the beds has been covered with leaves, straw, corn stalks, or any other loose matter that will keep the frost out until the bulbs are available.

October is the most important month for planting Tulip bulbs.

Just before the soil in the seed bed or cold frame freezes sow seed of the perennials marked with a ★ in this catalog.

Toward the end of the month begin your first planting of Paper White Narcissus, Soleil d'Or Narcissus, and Chinese Sacred Lily indoors. Make sure you have sufficient bulbs of these to make succession plantings two weeks apart until mid-March. Also start Gloriosa, the beautiful Climbing Lily, indoors now. Late in the month plant Dutch Iris.

This is the month to plant hardy Lily bulbs.

November

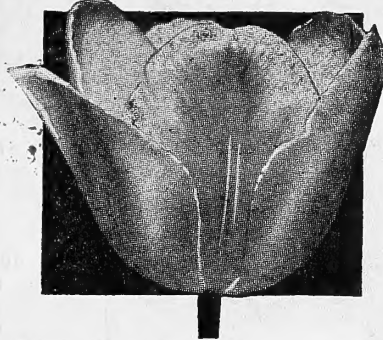

Continue planting Lilies throughout this month. There is still a chance to plant the many types of bulbs recommended for September and October planting as long as the ground is free from frost. Continue planting tender bulbs indoors for flowers during late winter and early spring.

December

Throughout December start bulbs of Paper White Narcissus, Soleil d'Or Narcissus, Chinese Sacred Lily, Amaryllis, and all tender bulbs for blooming indoors in the house.

Exquisite-Chalice-Cup or Medium-Trumpet Daffodils—*Narcissus*

The Chalice-Cup or Medium-Trumpet group of Daffodils or *Narcissus* includes some of the most beautiful varieties. In the *Incomparabilis* group the cup or crown is not less than $\frac{1}{3}$ of the perianth petals, whereas in the *Barri* group the cup is less than $\frac{1}{3}$ the length of the perianth segments. In the *Leedsii* group the size of the cup varies but the perianth always is white and the cup or crown is either white, cream, or has a pinkish tint. All of them are splendid for naturalizing because they are reliably hardy and they multiply more rapidly than those belonging to the Giant-Trumpet class. Those who have proper facilities will find them excellent also for growing in pots or pans. For best effect in the garden they should be planted in groups.

Enrich Your Garden Soil by Growing a Green-Manure Crop

Enrich your soil with valuable humus by planting a winter green-manure crop. In the vicinity of Philadelphia a combination of Winter Rye and Winter Vetch sown by September 20 will give a mass of fibrous roots and green tops for spading under between April 1 and 15 of next year. Sow the seed right in between the rows of the garden crops which still remain. Use 5 lbs. of Winter Rye per 500 square feet and about ½ lb. of Winter Vetch for the same area. Sow thinly and evenly after cultivating between the rows where that is possible. No appreciable damage will be done to the young seedlings when gathering the remaining garden crops.
